Total	¥10,246,246	¥9,440,473	¥11,038,516

Notes: 1. Bankrupt and quasi-bankrupt loans are nonperforming assets and similar loans that have fallen into bankruptcy due to reasons, including initiation of bankruptcy proceedings, start of reorganization proceedings, or submission of an application to start rehabilitation proceedings.

2. Doubtful loans are nonperforming assets with a strong likelihood that loan principal cannot be recovered or interest cannot be received according to the contract because of difficulties in the financial condition and business performance of the debtor who has not yet entered into bankruptcy.

3. Substandard loans include loans that are delinquent for over three months and restructured loans. Loans that are delinquent for over three months are loans with principal or interest being unpaid for more than three months counting from the day after the due date based on the loan agreement (excluding 1. and 2. in the above notes). Restructured loans are loans that provide certain concessions favorable to the borrower with the intent of supporting the borrower's restructuring. Examples of such concessions include reducing or exempting interest, postponing principal or interest payments, releasing credits, or providing other benefits to the borrower (excluding 1. and 2. in the above notes and loans that are delinquent for over three months).

4. Normal loans are loans that do not fall under the classifications for 1. to 3. in the above notes and where the debtor has no financial or business performance problems.

5. Classifications and calculation methods used in this table are based on the Ordinance for Enforcement of the Insurance Business Act. The table includes loans, securities lending, accrued interest, suspense payments, customer's liability for acceptances and guarantees, and guaranteed private offering loans of financial institutions.

6. For bankrupt and quasi-bankrupt loans, the estimated uncollectible amount calculated by subtracting the amount of collateral value or the amount collectible by the execution of guarantees from the balance of loans is directly deducted from the total loan amount. The estimated uncollectible amounts were ¥531 million, ¥1,036 million and ¥501 million as of March 31, 2017, 2016 and 2015, respectively.

2. Status of Risk-Monitored Loans

	Millions of Yen, %		
As of March 31	2017	2016	2015
Loans to bankrupt borrowers	¥ 1,764	¥ 1,969	¥ 2,179

Restructured loans	3,171	4,029	4,107
Total	¥32,058	¥34,827	¥38,297
[Ratio to total loans]	[0.41%]	[0.43%]	[0.46%]

Notes: 1. For loans to bankrupt borrowers and quasi-bankrupt borrowers (including collateralized and guaranteed loans), an estimated uncollectible amount (calculated by subtracting estimated collectible amounts based on collateral and guarantees from total loans) is directly deducted from the total loan amount. The amounts of loans to bankrupt borrowers were ¥399 million, ¥843 million, and ¥277 million as of March 31, 2017, 2016, and 2015, respectively. The amounts of delinquent loans were ¥132 million, ¥192 million, and ¥224 million as of March 31, 2017, 2016, and 2015, respectively.

2. Loans to bankrupt borrowers are loans with principal or interest payments being overdue for a significant period of time and interest not being accrued, including the following: (a) loans to borrowers that are legally bankrupt through filings for proceedings under the Corporate Reorganization Act, Civil Rehabilitation Act, Bankruptcy Act, or Companies Act; (b) loans to borrowers that have notes suspended from being traded; or (c) loans to borrowers that have filed for legal proceedings similar to the aforementioned proceedings based on overseas laws.

3. Delinquent loans are loans with interest not accrued and exclude loans to bankrupt borrowers and loans with interest payments extended with the objective of restructuring or supporting the borrowers.

4. Loans that are delinquent for over three months are loans with principal or interest unpaid for over three months counting from the day after the due date based on the loan agreement. Note that the account does not include loans to bankrupt borrowers and delinquent loans.

5. Restructured loans are loans that provide certain concessions favorable to the borrower with the intent of supporting the borrower's restructuring, such as by reducing or exempting interest, postponing principal or interest payments, releasing credits, or providing other benefits to the borrowers (excluding loans to bankrupt borrowers, delinquent loans, and loans that are delinquent for over three months from above).

6. Based on the results of asset self-assessment, accrued interest on loans is not recorded as income for obligors that are bankrupt, essentially bankrupt or nearing bankruptcy.

Asset Self-Assessment

Asset self-assessment refers to evaluating individual assets based on the financial condition of each borrower and its collateral, and is classified into categories. The Company has defined strict assessment standards based on the "Inspection Manual for Insurance Companies" of the Financial Services Agency (FSA) and conducted internal audits by the Auditing Department, which is independent from the groups handling the actual assessment. In addition, it undergoes an external audit by the external auditors (certified public accountants).

Standards for allowance for doubtful accounts

In order to take appropriate measures against bad debt, the Company has created the following types of reserve principles for self-assessment categories ①–⑤, as noted in the table of self-assessment categories, and builds reserves (bad debt accounting) in accordance with these principles.

Reserve principles:

- Normal: General allowance for doubtful accounts based on actual loan losses in the previous fiscal year. [①]
- On caution: General allowance for doubtful accounts based on the accumulated actual loan loss ratio (ratio of losses incurred from loans within three years from a certain date) for the previous three fiscal years. [②]
- Substandard: Corporate loans are divided into two categories: those that are not secured by collateral, guarantees, or others, and the actual loan loss ratio is calculated. [③]
- For doubtful, quasi-bankrupt and bankrupt loans, the necessary amount, concerning the balance calculated by subtracting the estimated collectible amount based on collateral and guarantees from total loans, is provided as a specific allowance for doubtful accounts. [④] The portion of the amount in "Category IV" is directly deducted from total loans. [⑤]

STATUS OF FINANCIAL ASSETS (NONCONSOLIDATED)

6. Data on Fair Value of Securities (Company Total), continued

Policy-reserve-matching bonds

The Company has established the following target portfolios that correspond to specific types of insurance products:

- Regarding lump-sum payment products (lump-sum payment endowment, lump-sum payment annuities, and lump-sum payment whole life insurance) and guaranteed fixed-term rate group annuities, the Company has established an Asset/Liability Management (ALM) portfolio that aims to avoid interest fluctuation risks by predicting future cash flows from debt.
- In terms of other types of insurance, the Company has established an ALM portfolio that has a goal of expanding long-term future revenue by evaluating debt characteristics and by operating within a specific range of risk allowance.

Given the characteristics of these insurance products and this type of investment, the Company has specified and subcategorized the following insurance policies based on "Temporary Treatment of Accounting and Auditing Concerning Policy-reserve-matching Bonds in the Insurance Industry" (Japan Institute of Certified Public Accountants Industry Audit Committee Release No. 21).

- All insurance policies for other than lump-sum payment products and group annuities
- All insurance policies for lump-sum payment products other than variable assumed rate-type insurance
- All insurance policies for group annuities other than guaranteed fixed-term rate products

Concerning bonds held for the purpose of controlling the respective duration (level of market price fluctuations against fluctuations in interest rates) of bonds that fit into these subcategories, the Risk Management Committee regularly confirms that the policy reserves and the duration are in a state of general consistency. Based on such confirmation, the Company classifies most Japanese yen-based debt securities as policy-reserve-matching bonds.

35. Policy Reserves Balance of the General Account Calculation Method and Integers Used as the Basis for Calculations Related to Insurance Policies with Separate Accounts that Guarantee a Minimum Amount of Insurance Benefits

1. Policy reserves balance (general account)

As of March 31	Millions of Yen		
	2017	2016	2015
Policy reserves balance (general account)	¥—	¥—	¥—

Notes: 1. Applicable to insurance policies (policies applicable to standard policy reserves) as defined in Article 68 of the Ordinance for Enforcement of the Insurance Business Act.
2. Policy reserves balance (general account) includes the premium reserve fund related to minimum guarantees.
3. Applied to insurance policies executed on or after April 1, 2004.

2. Calculation method and integers used as the basis for calculations

In terms of the calculation method, we use the standard method defined in Section 9, No. 1 of Ordinance No. 48 issued by the Ministry of Finance in 1996. Regarding the integers used as the basis for calculations (volatility), the Company uses 0.3% for short-term loans that have not been defined and the amount defined in Section 9, No. 1 (d) of the aforementioned bulletin in all other cases.

36. Confirmation of Reasonableness and Validity of Article 121, Paragraph 1, Item 1 of the Insurance Business Act (Limited to that Relating to Third-Sector Insurance)

1. Method for assuring the appropriateness of the accumulation of policy reserves in the third sector

The stress test and liability adequacy test are conducted based on clear management regulations following risk management policies provided for by law or by the Board of Directors. Necessary accumulated policy reserves are calculated appropriately.

In addition, a test—conducted by the Auditing Department, which is independent of the Accounting Department—ensures the appropriateness of the accumulation.

2. Reasonableness and validity of established standards for risk frequency, etc., in the liability adequacy test and stress test

To provide for uncertainty regarding the worsening of the rate of incidence of insured events, the Company establishes a risk frequency that covers a range beyond what is normally forecasted or a normally forecasted range.

Specifically, this assumes that the future incidence of insured events follows a regular distribution based on the record of past insured events and the historical change of those past events, and that a level covering increased insurance premiums has been set at a uniform probability (99.0% and 97.7%).

50. Overview of the Fiscal Year Ended March 31, 2017, Investment (General Account)

① Investment environment

In the fiscal year ended March 31, 2017, the Japanese economy started the fiscal year with largely flat growth, primarily due to the effects of falling resource prices and stagnant overseas economies, including newly emerging economies. From the summer onward, the Japanese economy started to gradually recover, owing to an improvement in production activity underpinned by solid exports, despite continued weakness in the level of consumer spending.

- The Nikkei Stock Average started the fiscal year at ¥16,758. Subsequently, the index declined at times in response to the outcome of the U.K. national referendum in June. The index then began to increase owing to the Bank of Japan's policies to support stock prices and the stronger U.S. dollar reflecting positive expectations for the policies of U.S. President Donald Trump. The index finished at ¥18,909 at the end of March.
- The yield rate on 10-year government bonds started the fiscal year at -0.05%. It then declined further to around -0.3% in July, mainly due to a stronger risk-off stance among investors reflecting the outcome of the U.K. national referendum. Thereafter, the rate showed signs of rising due to the introduction of a policy of quantitative and qualitative monetary easing with yield curve control by the Bank of Japan. However, the yield rate has remained at a low level, finishing at 0.07% at the end of March.
- The yen-U.S. dollar exchange rate started the fiscal year at the ¥112 level. Thereafter, the rate temporarily dipped below U.S.\$1=¥100 in response to the outcome of the U.K. national referendum. In the second half of the fiscal year, the yen temporarily depreciated to the ¥118 level following an interest rate hike by the Federal Reserve Board and positive expectations for the Trump administration. Thereafter, however, the outlook for the policies of the Trump administration became increasingly uncertain. Consequently, the yen-U.S. dollar exchange rate finished at ¥112.19 at the end of March.

The yen-euro exchange rate started the fiscal year at the ¥127 level. Subsequently, in response to the outcome of the U.K. national referendum, the yen temporarily appreciated to the ¥109 level. Thereafter, excessive concerns about the U.K. leaving the EU subsided, and the yen returned to the ¥124 level. However, a sense of caution lingered over the European political climate, including the French presidential election. The yen-euro exchange rate finished at ¥119.79 at the end of March.

② Investment policy

The Company creates portfolios that serve as core medium- to long-term investments, based on its ALM approach of appropriately controlling assets and liabilities.

Specifically, to supply the stable long-term yields promised to policyholders, the Company has positioned public and corporate bonds and loans that the

Company expects to provide stable Japanese yen-denominated revenue as its primary assets. Furthermore, the Company is working to improve medium- to long-term revenues and is investing in domestic and foreign securities through a process of controlling risk while taking into account management stability with a view to returning profits to policyholders through dividend payouts. The Company also continues to steadily work on investments that can earn excess return, such as corporate bonds and securitization products, as well as the asset management field, including private equity and hedge funds, with careful attention to diversified investment and risks, from a standpoint of diversification of earning opportunities.

③ Overview of investment results

In the fiscal year ended March 31, 2017, the Company has positioned yen-denominated assets that can be expected to provide stable income, such as bonds and loans, as its core assets. From the perspective of improving profits in the mid- to long-term, the Company invested in assets, such as stocks and foreign securities, within the scope of acceptable risk while taking into account business stability.

Domestic bonds

Considering the low interest rate environment, the Company limited the additional accumulation of outstanding domestic bond balances.

Domestic stocks

The Company implemented replacements of issues while focusing its attention on the overall state of returns to investors, including corporate profitability and dividends from the point of view of investing for the medium- to long-term, with the goal of increasing portfolio profitability.

Foreign securities

Regarding foreign securities, the Company invested in foreign currency-denominated bonds based on currency movements. Also, the Company invested in foreign bonds that hedge the risk of exchange rate fluctuations, taking into consideration the advantages of yen interest rate assets.

Loans

The Company focused on safe and stable prime lendings by appropriately assessing credit risks.

Real estate

The Company worked to secure profitability through strengthening the competitive edge of its buildings by decreasing vacancy rates and renovating preexisting properties, among others.

85. Qualitative Information on Derivative Transactions (General Account)

1. Transaction details

The following are derivative transactions that the Company uses:

Interest rate-related:	Interest rate futures, interest rate swaps, and swaptions
Currency-related:	Foreign exchange forward contracts, currency options, and currency swaps
Equity-related:	Equity index futures, equity index options, equity options, and equity forwards
Bond-related:	Bond futures, bond futures options, and bond sales with attached options

2. Policy

Given its goal of achieving efficient asset investment, the Company mainly uses derivatives for the purpose of controlling investment risks.

3. Purpose

The Company mainly uses derivatives to hedge market risk exposures related to investment assets in order to ensure stable profit from assets entrusted to the Company by its policyholders.

4. Risk details

The derivative transactions the Company conducts involve market risks (fluctuations in interest rates, stock prices, currency exchange rates, etc.) and credit risks (transaction partner's inability to fulfill obligations due to bankruptcy, etc.). The Company recognizes market risks as limited given that derivative transactions are mainly for the purpose of controlling investment risks. In terms of credit risks, the Company's transactions are through domestic and foreign financial instrument exchanges or with transaction counterparties with high credit ratings; thus, the risk of unfulfilled obligations remains low.

5. Risk management system

The Company established a system that maintains transaction limits for derivative transactions based on the purpose and type of the transaction. In addition, this system incorporates front-office controls, whereby the back-office confirms transaction details through reconciliation with external documentations. Furthermore, the system is designed such that the state of market risks is monitored and analyzed quantitatively and information on the amount of risk, as well as on positions and the status of profits and loss, is reported periodically to the Investment Risk Management Committee.

6. Supplementary explanation regarding quantitative information

(1) Supplementary explanation regarding notional amounts (amount of contracts)

The notional amounts for swap transactions and contract amounts of options transactions are nominal values related to interest conversions, etc., and are not meant to indicate a level of risk amount.

The credit risk of derivative transactions refers to latent costs required to restore a market position in the event a transaction partner defaults. The Company calculates this risk using the current exposure method.

(2) Supplementary explanation regarding market price calculations

Futures and other market transactions:

Liquidation value or closing market price at year-end

Equity option transactions:

Theoretical values based on liquidation value or closing market price at year-end, volatility and other data obtained from external information vendors

Foreign exchange forward contracts and currency options:

Theoretical values based on the Telegraphic Transfer Middle rate (TTM) and discount rates obtained from financial institutions that are the counterparties in such transactions

Interest rate swap transactions and currency swaps:

Theoretical present value calculated by discounting the difference of future cash flows based on published market interest rates

Equity forward transactions:

Theoretical present value calculated by discounting future cash flows based on published market interest rates.

(3) Supplementary explanation regarding transaction gains and losses

The Company mainly utilizes derivative transactions as a complementary measure in controlling market risks inherent in spot investments.

For example, foreign exchange forward contract and currency option transactions are used mainly to hedge fluctuations in foreign currency exchange rates; it is thus necessary to measure profits combined with foreign bonds, stocks, and other foreign currency spot assets.

7. Hedge accounting methods

The Company mainly applies the following hedge accounting methods: The exceptional accounting treatment ("*Tokurei-shori*") for interest rate swaps is applied to hedge the cash flow volatility of certain loans denominated in Japanese yen and certain loans denominated in foreign currencies; deferred hedge accounting for interest rate swaps is applied to hedge the interest rate fluctuation exposures on certain insurance policies, based on the Industry Audit Committee Report No. 26, "Accounting and Auditing Treatments related to Application of Accounting for Financial Instruments in the Insurance Industry" issued by the Japanese Institute of Certified Public Accountants; deferred hedge accounting and designated hedge accounting ("*Furiate-shori*") for currency swaps are applied to hedge the cash flow volatility caused by foreign exchange rate fluctuations on certain foreign currency-denominated bonds, certain foreign currency-denominated loans, and foreign currency-denominated subordinated corporate bonds issued by the Company; fair value hedge accounting for foreign exchange forward contracts are applied to hedge the price fluctuation exposures related to foreign exchange rate fluctuations on certain foreign currency-denominated bonds and other instruments; and fair value hedge accounting for equity forward contracts is applied to hedge the price fluctuation exposures on certain domestic stocks. Effectiveness of hedging activities is mainly evaluated by ratio analysis to compare fair value movements on the hedging instruments and the hedged items in accordance with the Company's internal risk management policies.

SEPARATE ACCOUNT INDICATORS

About the General Account and Separate Account

A life insurance company classifies and manages its assets in two accounts, the separate account and the general account.

Individual variable insurance, individual variable annuities, and certain group annuities, which change in terms of insurance amount and accumulated value based on investment performance in assets, are managed as a separate account with a clear division from the general account.

89. Asset Management Overview for the Fiscal Year Ended March 31, 2017 (Separate Account Assets for Individual Variable Insurance and Individual Variable Annuities)

In regard to the stock prices at domestic and foreign exchanges, although there were phases of significant temporary fluctuations at the time of the U.K. public referendum in June 2016 and the U.S. presidential election in November 2016, prices significantly rose near the end of the fiscal year against the backdrop of global economic recovery and policy expectations for the new U.S. administration. Domestic and foreign interest rates increased centering on the U.S. and Europe with a backdrop of increases in the federal funds rate in December 2016.

Amid this operating environment, the investment return on individual variable insurance for the fiscal year ended March 31, 2017 was positive at 9.23%.
