(5) Information on Derivative Transactions

[Qualitative information on derivative transactions]

(a) Transaction details

Nippon Life Insurance Company (the "Company") is engaged in the following derivative transactions:

Interest rate-related: Interest futures, interest rate swaps, and swaptions

Currency-related: Foreign exchange forward contracts, currency options, and currency

swaps

Equity related: Equity index futures, equity index options, equity options, and equity

forward

Bond-related: Bond futures, bond future options, and bond purchases and sales with

attached options

(b) Policy

The Company mainly uses derivative transactions for the purpose of controlling risks associated with assets or liabilities.

(c) Purpose

The Company mainly uses derivatives to hedge risks associated with assets or liabilities and applies hedge accounting to certain derivatives.

The Company mainly applies the following hedge accounting methods:

- The exceptional accounting treatment ("*Tokurei-shori*") is applied to interest rate swaps to hedge the cash flow volatility of certain loans denominated in Japanese yen and foreign currencies.
- Deferred hedge accounting is applied to interest rate swaps to hedge the interest rate fluctuation exposures on certain insurance policies, based on the Industry Audit Committee Report No. 26, "Accounting and Auditing Treatments related to Application of Accounting for Financial Instruments in the Insurance Industry" issued by the Japanese Institute of Certified Public Accountants.
- Deferred hedge accounting and designated hedge accounting ("Furiate-shori") are applied to currency swaps to hedge the cash flow volatility caused by foreign exchange rate fluctuations on certain foreign currency-denominated bonds, loans, and subordinated corporate bonds issued by the Company.
- Fair value hedge accounting is applied to foreign exchange forward contracts to hedge the price fluctuation exposures related to foreign exchange rate fluctuations on certain foreign currency-denominated bonds and other instruments.
- Fair value hedge accounting is applied to equity forward contracts to hedge the price fluctuation exposures on certain domestic stocks.

Effectiveness of hedging activities is mainly evaluated by performing a ratio analysis, comparing the fair value difference between hedging instruments and hedged items in accordance with the Company's risk management policies.

(d) Risk details

Derivative transactions entered into by the Company are exposed to market risks (such as fluctuation risks in interest rates, currency exchange rates, and stock prices) and credit risks (such as counterparties' default risks due to bankruptcy). The Company recognizes market risks as limited given that derivative transactions are mainly for the purpose of controlling risks associated with assets or liabilities. Further, credit risks should remain low as the Company's transactions are entered into either through domestic and foreign financial instrument exchanges or with creditworthy counterparties.

(e) Risk management system

The Company sets up transaction limits for derivative transactions based on the purpose and types of transactions. In addition, a control system is implemented for the front office engaged in investment activities, where the back office verifies transaction details with external documentations. Furthermore, the system is designed such that the state of risks, along with assets or liabilities, is monitored and analyzed quantitatively, and information on the amount of risk as well as on positions and the status of profit and loss is reported periodically to the Investment Risk Management Committee.

(f) Supplementary explanation regarding quantitative information

i) Supplementary explanation regarding notional amount (contract amount) Notional amounts for swap transactions and contract amounts for option transactions represent nominal values related to interest conversions and are not meant to indicate the level of credit risks (latent costs required to restore a market position in the event of a default of counterparties).

ii) Supplementary explanation regarding the fair value calculations

[Futures and other market transactions]

Liquidation value or closing market price at the balance sheet date

[Equity option transactions]

Mainly liquidation value or closing market price at the balance sheet date, or valuations obtained from external parties

[Foreign exchange forward contracts, currency options, interest rate swap transactions, currency swaps, swaptions, equity forward transactions, and Over-the-counter (OTC) bond options.]

Mainly valuations obtained from external parties

iii) Supplementary explanation regarding net gains and losses

The Company mainly utilizes derivative transactions as a complementary measure in controlling risks associated with assets or liabilities.

For example, foreign exchange forward contracts and currency option transactions are mainly utilized to hedge fluctuations in foreign currency exchange rates; therefore, the amount of gains and losses arising from foreign bonds, stocks, and other foreign currency-denominated assets should be taken as a total amount.

[Quantitative information (general account)] (combined total with and without hedge accounting applied)

1. Breakdown of net gains/losses (with and without hedge accounting applied)

(100 Million Yen)
