Nippon Life has based its life insurance operations on the spirit of “co-existence, co-prosperity, and mutualism.” With this in mind, we have carried out investment and finance that considers profitability, security and the public good. ESG investment and finance is an initiative aligning such a basic spirit since our founding and Nippon Life believes that it will improve its existing investment and finance decisions from medium- and long-term perspectives. In our Medium-Term Management Plan "Going Beyond (2021-2023) ", we have positioned ESG investment and finance as one of the pillars of our asset management strategy and are further strengthening our efforts.

Through "ESG Investment and Finance Report 2022", we have disclosed our view and significance to ESG investment and finance, specific details of each ESG investment and finance method, our response to climate change issues and other social issues, activities in global initiatives, and so on.

Going forward, Nippon Life will continue to engage in ESG investment and finance with the aim of contributing to the realization of a sustainable society and better serving the interest of policyholders.
